```
106
            int T,n;
  107
            scanf("%d",&T);
  108
           while(T--)
  109
  110
                root=(struct Node *)malloc(sizeof(Node));
  111
                Init(root);
  112
                scanf("%d",&n);
  113
               for(int i=0;i<n;i++)
  114
  115
                    scanf("\n%s", keyword);
  116
                    Build trie(keyword);
  117
  118
                Build_AC_automation(root);
  119
                scanf("\n%s",s);
  120
                printf("%d\n",query(root));
  121
  122
            return 0;
  123
  124 }
